Abstract

In this study, the aquatic and semiaquatic Coleoptera species that were collected from Diyarbakır, Mardin and Batman provinces in 2013-2015 years, were evaluated. 44 taxa belong to eight families (Coleoptera: Polyphaga: Dryopidae, Helophoridae, Heteroceridae, Hydrochidae, Hydrophilidae; Adephaga: Gyrinidae, Haliplidae, Noteridae) were detected in the research area. Within these species, 32 taxa were first records for the research area.

Keywords: Aquatic Coleoptera, Batman, Diyarbakır, Mardin, Turkey.

Introduction

Order Coleoptera has 176 families, 29500 genera and 386500 species (Slipinski, Leschen, & Lawrence, 2011). Four suborders of Coleoptera are Archostemata, Myxophaga, Adephaga and Polyphaga (Lawrence, 2016; Archangelsky, Beutel, & Komarek, 2016). The suborder Polyphaga includes more than %90 of the Coleoptera species (Glime, 2015). We found and collected the aquatic and semiaquatic specimens of Dryopidae, Helophoridae, Heteroceridae, Hydrochidae, Hydrophilidae families (Coleoptera: Polyphaga); Gyrinidae, Haliplidae and Noteridae families (Coleoptera: Adephaga) in the research area.

Dryopidae family has 263 species belong to 32 genera worldwide (Kodada, Jäch, Ciampor, & Ciamporovazatovicova, 2007). They are most diverse in Oriental and Neotropical regions and they live in many types of aquatic, semiaquatic and terrestrial habitats (Kodada, & Jäch, 1995). 11 species belong to three genera were known from Turkey (Taşar, 2014a, 2017a). Helophoridae family has 192 species in worldwide (Archangelsky, *et al.*, 2016). 51 species were known from Turkey (Darılmaz, & İncekara, 2011; Taşar *et al.*, 2012; Taşar, 2017b). With a recent study presented by Taşar (accepted paper), the number of Helophoridae species that known from Turkey were raised to 52. Most Helophoridae can functionally be classified as true water beetles. The adults spend their most of time underwater. All

known larvae and pupae are terrestrial (Stals, 2008). Heteroceridae family has 200 species belong to 5 genera worldwide (Mascagni, 1995; Taşar, 2014a). They usually live close to water in habitats consisting of mud or very fine sand. They spend much of their time in shallow galleries where they dig into the soil (Clarke, 1973; Aguilera, Mascagni, & Ribera, 1998; Mascagni, 1995; Taşar, 2014a). 13 species belong to two genera were known from Turkey (Taşar, & Mascagni, 2014). Hydrochidae family includes 181 species in worldwide. They were found in all zoogeographic regions (Archangelsky, *et al.*, 2016). Eight species were known in Turkey (Taşar, 2017c). Furthermore, with this recent study presented by Taşar (2017c), the number of Hydrochidae members were raised to 182 in worldwide. Both the larvae and adults are aquatic (Endrödy-Younga, & Stals, 2008; Archangelsky, *et al.*, 2016). Hydrophilidae has 2932 described species in worldwide. 103 species were known from Turkey (Darılmaz, & İncekara, 2011; İncekara *et al.*, 2011; Taşar *et al.*, 2012; Taşar, 2014b; Polat, Taşar, & İncekara, 2015; İncekara, Bektaş, Taşar, & Polat, 2016; Taşar, 2017b, accepted). Most of the species are aquatic. Other species are semiaquatic or riparian, and many others are terrestrial (Archangelsky, *et al.*, 2016). Gyrinidae family has 750 species belong to 13 genera in worldwide. Both adults and larvae are true aquatic (Garrido, Benetti, & Bilbao, 2011). 11 species were known from Turkey (Darılmaz, & Kiyak, 2009). Haliplidae family has about 200 species belong to 5

genera in worldwide. Both adults and larvae live in a wide variety of freshwater habitats (Garrido *et al.*, 2011). 16 species were known from Turkey (Darılmaz, & Kiyak, 2009). Noteridae family has 250 species belong to 14 genera in worldwide. Both adults and larvae are aquatic (Garrido *et al.*, 2011). Three species were known from Turkey (Darılmaz, & Kiyak, 2009).

There is not any detailed study about aquatic coleopteran from Diyarbakır, Mardin and Batman provinces, Turkey. The aim of this study was to present contributions to the knowledge of aquatic Coleoptera species in these three provinces (South-eastern Anatolian region, Turkey).

Materials and Methods

Study Sites

Provinces of Diyarbakır, Mardin and Batman are located in the South-eastern Anatolian region of Turkey (Figure 1). They have terrestrial climate. All of them have many types of aquatic habitats such as; rivers, ponds, lakes, spring waters and seasonal puddle waters. A lot of small water sources set off

towards the end of summer months with the effect of terrestrial climate. Dicle, one of Turkey's major river passes through Diyarbakır and Batman provinces. We collected our specimens in 77 different sampling sites in the research area. Detailed locality data of collected specimens were listed in Table 1.

Sampling Method

The specimens were collected from freshwater habitats of Diyarbakır, Mardin and Batman provinces with sieves having 3,15x1 mm mesh size. The beetles were killed with ethyl alcohol (%70) and stored in small bottles until identification. Specimens were cleaned with brush before identification. Aedeagophores (male genitalia) of collected specimens were dissected under a stereo microscope (Soif SZM-45) in the laboratory. The identified species were converted into museum material and deposited in the private collections of the author at Adiyaman University, Turkey.

Zoogeographic distribution of identified species were presented using Vigna Taglianti *et al.* (1999). The zoogeographic categories used and their abbreviations are listed below:

Results

In the current study, 44 species of eight families Dryopidae, Gyrinidae, Haliplidae, Helophoridae, Heteroceridae, Hydrochidae, Hydrophilidae and Noteridae were collected and identified from the research area..The altitudes and coordinates of the localities from where the material has been collected are given in Table 1.

Determined species and their locality data are listed below:

Family: Dryopidae Billberg, 1820

Dryops rufipes (Krynicki, 1832)

Discussion

In the current study, Hydrophilidae represent the highest diversity with 25 taxa, Helophoridae: 13 taxa. Dryopidae, Gyrinidae, Haliplidae, Heteroceridae, Hydrochidae and Noteridae families are each represented by one taxon. Within these 44 taxa: 32 species and subspecies were presented as new records for the research area.

To the best of our knowledge, there is not any detailed study on the species of Aquatic Coleoptera families in Diyarbakır, Mardin and Batman provinces. There are a few studies includes some specimens collected from road sides by foreign researchers.

Seven species of Helophoridae family [*Helophorus micans* (Faldermann, 1835), *H. aquaticus* (Linnaeus, 1758), *H. syriacus* Kuwert, 1885, *H. daedalus* d'Orchymont, 1932, *H. hilaris* Sharp, 1916, *H. lewisi* Angus, 1985, *H. pallidipennis* (Mulsant & Wachanru, 1852)]; four species of Hydrophilidae family (*Laccobius hindukuschi* Chiesa, 1966, *L. sipyulus* d'Orchymont, 1939, *L. syriacus* Guillebeau, 1896, *L. gracilis* Motschulsky, 1855) (Darılmaz, & Incekara, 2011) and one species of Heteroceridae family [*Heterocerus fenestratus* (Thunberg, 1784)] were reported in Diyarbakır province (Taşar, & Mascagni, 2014). Three species of Helophoridae family (*H. aquaticus* (Linnaeus, 1758), *H. syriacus* Kuwert, 1885, *H. hilaris* Sharp, 1916) and one species of Hydrophilidae family (*L. gracilis* Motschulsky, 1855) were reported in Mardin province (Darılmaz, & Incekara, 2011).

Although *L. halophilus* Gentili, 1982, *L. sculptus* d'Orchymont, 1935, *L. sulcatus* Reitter, 1909, *Helophorus brevipalpis levantinus* Angus, 1988, *Haliphus kulleri* Vondel, 1988 (from Diyarbakır province), *L. exilis* Gentili, 1974, *Cercyon abeillei* Guillebeau, 1896 (from Mardin province), were reported in the research area (Darılmaz, & Kiyak, 2009; Darılmaz, & Incekara, 2011), none of the specimens of these species was found at the research area in the current study.

The most dominant species in the research area were indicated as *Helophorus grandis*, *Laccobius syriacus* and *Helophorus micans* respectively (Figure 2.).

All the species collected from the research area can be classified in 10 zoogeographic categories (ASF, CEM, EUR, MED, OLA, SIE, SWA, TEM, TUE and W-PAL) into the three groups (WS, E, and M) (Figure 3-4).

Widely spread complex (WS) includes eight

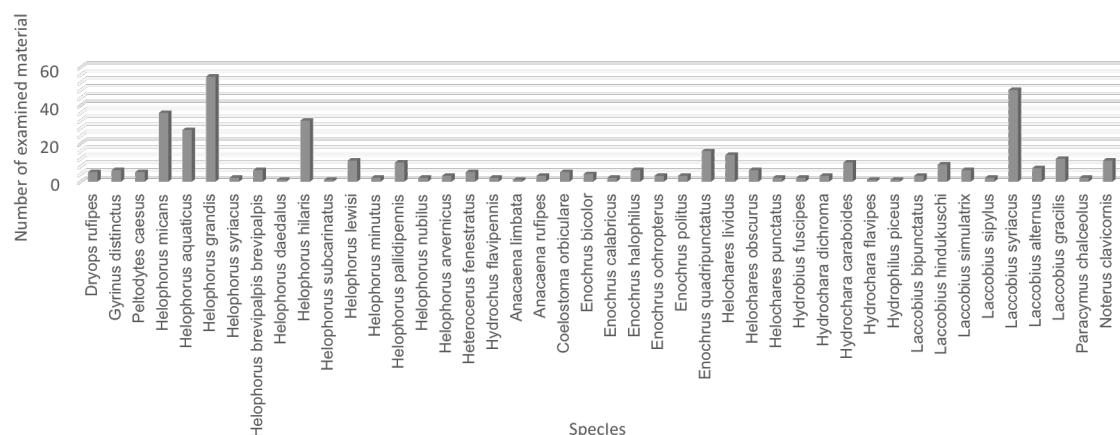

Figure 2. Determined species and number of examined materials.

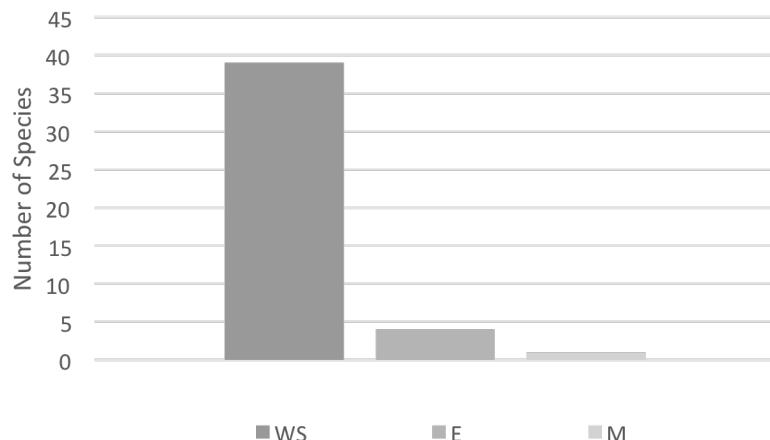

Figure 3. Main zoogeographic complexes in aquatic and semi-aquatic coleoptera fauna in the research area, showing the number of including species. WS: Wide spread, E: European complex, M: Mediterranean complex.

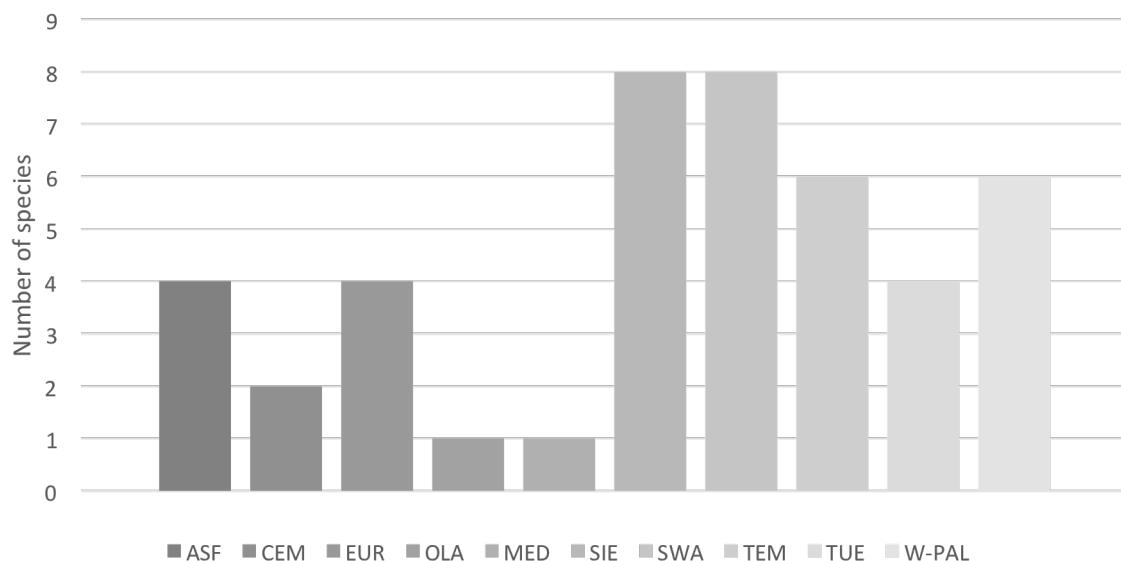

Figure 4. Zoogeographical elements in aquatic and semi-aquatic coleoptera fauna in the research area, showing the number of including species. ASF: Asiatic-European, CEM: Centralasiatic-European-Mediterranean, EUR: European, OLA: Holarctic, MED: Mediterranean, SIE: Sibero-European, SWA: SW-Asiatic, TEM: Turano-European-Mediterranean, TUE: Turano-European, W-PAL: W-Palaearctic.

zoogeographic categories (ASF+CEM+OLA +SIE+SWA+TEM+TUE+W-PAL) represented by 39 species (88.63%). Within the WS complex SIE (20.51%) and SWA (20.51%) species are dominant, followed by TEM (15.38%), W-PAL (15.38%), ASF (10.25%), TUE (10.25%), CEM (5.12%), OLA (2.56%).

European complex (E) is represented by four species (9.1%) in only European category (EUR).

Mediterranean complex (M) is represented by only one species (2.27%) in only Mediterranean category (MED).

There is no endemic species into the collected specimens from the research area. But two species

have a limited zoogeographical distribution: *Helophorus daedalus* was reported in only Iran and Turkey; *Enochrus calabricus* was reported in only Italy and Turkey (Przewoźny, & Fikáček, 2016).

Consequently, this study presents new distributional data for Turkish aquatic Coleoptera fauna. More studies are needed to establish the overall distribution of Turkish Hydrophiloidea fauna.

Acknowledgements

Author would sincerely thanks to Dr. Medeni AYKUT (Dicle University, Diyarbakır, Turkey) for

his help about collecting some specimens in the research area. This study was partially presented in 3rd International Congress on Zoology and Technology, 12-17 July 2017, Afyon, Turkey.
