Abstract

The collected aquatic Coleoptera specimens from inland water of the Western Black Sea Region between 2002-2005 are examined. In this study, 47 taxa belonging to 9 family were determined and their distribution in Turkey are given. Twenty three of them are the first record for the study area.

Keywords: Gyrinidae, Haliplidae, Noteridae, Dytiscidae, Helophoridae, Hydrophilidae, Hydrochidae, Dryopidae, Elmidae.

Türkiye'nin Batı Karadeniz Bölgesi ve Civarının Sucul Koleopterlerinin (Ordo: Coleoptera) Dağılımına Katkılar

Özet

2002-2005 yılları arasında Batı Karadeniz Bölgesi içsularından toplanan sucul Coleoptera örnekleri değerlendirilmiştir. Bu çalışmada, 9 familyaya ait 47 takson tespit edilmiş ve tespit edilen taksonların Türkiye'deki dağılımları verilmiştir. Tespit edilen taksonlardan yirmiüçü araştırma bölgesinden ilk kez kaydedilmiştir.

Anahtar Kelimeler: Gyrinidae, Haliplidae, Noteridae, Dytiscidae, Helophoridae, Hydrophilidae, Hydrochidae, Dryopidae, Elmidae.

Introduction

The order Coleoptera is the largest order of insects. The species in this order are terrestrial, semiaquatic or aquatic. Water beetles can be found in a many different water habitats, it inhabits freshwater, brackish and salt waters (Hansen, 1987; Nilsson and Homen, 1995). Most species live in stagnant or slowly and rapid streams or pools, ponds, lakes, marshes, ditches, canals, brooks, rivers etc., however, members of the Elmidae reside in rocky-bottomed rapid streams from high mountain (Ward, 1992).

While some species have good swimmers, most of the aquatic hydrophiloids are rather poor swimmers and occur among vegetation along the shores (Hansen, 1997).

Hitherto, in the systematic studies about the aquatic Coleoptera on our country the members of Gyrinidae (12 taxa), Haliplidae (16 taxa), Hygrobiidae (1 taxa), Noteridae (3 taxa), Dytiscidae (136 taxa), Helophoridae (55 taxa), Hydrophilidae (91

taxa), Hydrochidae (6 taxa), Hydraenidae (almost 200 taxa), Elmidae (28 taxa), Dryopidae (9 taxa) were identified (Angus, 1988, 1992; Audisio *et al.*, 1993; Balfour-Browne, 1963; Bollow, 1937; Brancucci, 1988; Darılmaz and Kiyak, 2009a-b, 2010; Delève, 1963; Dettner, 1997; Erman, 2005; Erman *et al.*, 2005, 2007; Fery and Erman, 2009; Fery and Nilsson, 1993; Gentili, 1979, 1982, 1988, 1991, 2000; Gentili and Chiesa, 1975; Guéorguiev, 1981; Hájek *et al.*, 2005; Hansen, 1987; Hebauer, 1994; Hebauer and Klausnitzer, 2000; Holmen, 1987; İncekara, 2008; Guignot, 1947; İncekara *et al.*, 2002, 2003, 2004, 2005a-b, 2009; Jäch, 1984a-b, 1988a-b, 1989a-b, 1990, 1991a-b, 1992, 1993, 1994a-b, 1997; Jäch and Diaz, 2001; Jäch and Kasapoğlu, 2006; Janssens, 1963a-b, 1965, 1970, 1980; Kasapoğlu and Erman, 2002; Kasapoğlu *et al.*, 2006, 2010; Kiyak *et al.*, 2006a-b, 2007; Makhan, 2005; Mart and Erman, 2001; Nardi, 2001; Olmi, 1976; Toledo, 2004, 2009; Topkara and Balık, 2008; Vondel, 1991, 1992, 1997; Vondel *et al.*, 2006; Zaitsev, 1972).

There are many systematically, ecological and zoogeographical studies, by the native and foreign authors about the water beetles fauna of Turkey but there is not a comprehensive study in the Western Black Sea Region except this work. The aim of this study is to make a contribution to the aquatic Coleoptera fauna of the Western Black Sea Region.

Materials and Methods

All samples were collected with a view to determine on the fauna of inland waters in the Western Black Sea Region and its environs between 2002 and 2005. Specimens were sampled from various aquatic habitats like lake, river, pond and smaller pools, with either a sieve like benthos ladle or aquarium net having a 0.5 mm or 1 mm mesh diameter. The samples were preserved with 4% formalin solution in the field. Then they were dried in Petri dishes and preserved in small sample bottles for storing long periods in the laboratory.

First the samples were investigated under stereomicroscope to take off their aedeagus by dissecting needles. To remove the muscle tissues of aedeagus, they were stored for 1 to 2 hours in 10% NaOH solution. The above sea levels (a.s.l.) of the stations were measured with equipment of GPS. Materials have been deposited at the Museum of Faculty of Fisheries, Ege University, Izmir, Turkey (ESFM).

Research Area

The most northern end of the research area is starting from the east of Adapazarı to Ayancık (Sinop) and includes coastline of the Black Sea. Eastern border of the research area is Kızılırmak River. Most southern point is Çavdarhisar (Kütahya), and Mahmudiye (Eskişehir), Güdül-Kızılcahamam are on the southeastern border. In the most extreme point of western there is Göksu River (Yenişehir-Bursa).

Results

This study is conducted to determine inland water Coleoptera fauna of the Western Black Sea Region and its environs. Materials are examined systematically and information of distribution about the determined taxa is given below.

Family Gyrinidae

Gyrinus distinctus Aubé, 1836

Materials: (L7), 2♀♀, ESFM-INS/2004-001;

(L8), 7♀♀, ESFM-INS/2004-003; (L18), 2♂♂ 2♀♀, ESFM-INS/2004-018; (L22), 6♂♂, ESFM-INS/2004-023; (L23), 1♂, ESFM-INS/2004-029; (L45), 1♂, ESFM-INS/2005-037; (L48), 3♀♀, ESFM-INS/2005-041; (L49), 1♀, ESFM-INS/2005-042; (L53), 3♂♂ 3♀♀, ESFM-INS/2005-056.

Distribution in Turkey: Adana, Aksaray, Antalya, Bursa, Denizli, Isparta, İzmir, Konya, Trabzon, Bolkar Mountains, Toros Mountains (Guéorguiev, 1981; Darılmaz and Kiyak, 2006a, 2009a; Karaman et al., 2008; Kiyak et al., 2006b).

Remarks: *Gyrinus distinctus* is new record for the Gyrinidae fauna of the West Black Sea Region.

Gyrinus substriatus Stephens, 1829

Materials: (L13), 5♂♂, ESFM-INS/2004-009; (L60), 1♂, ESFM-INS/2005-080.

Distribution in Turkey: Adana, Bursa, Konya, Kars, Sakarya, Tokat, Erciyes Mountain (Guéorguiev, 1981; Darılmaz and Kiyak, 2009a).

Gyrinus caspius Ménétríés, 1832

Materials: (L36), 7♂♂ 4♀♀, ESFM-INS/2004-070.

Distribution in Turkey: Adana Afyon, Aksaray, Antalya, Edirne, Burdur, Hatay (Guéorguiev, 1981; Darılmaz and Kiyak, 2006a, 2009a; Kiyak et al., 2006b).

Remarks: *Gyrinus caspius* is new record for the Gyrinidae fauna of the West Black Sea Region.

Orectochilus villosus villosus (Müller, 1776)

Materials: (L7), 3♂♂ 1♀, ESFM-INS/2004-002; (L8), 1♀, ESFM-INS/2004-004; (L14), 1♀, ESFM-INS/2004-011; (L15), 1♂, ESFM-INS/2004-012; (L18), 5♂♂ 6♀♀, ESFM-INS/2004-019; (L20), 3♂♂ 5♀♀, ESFM-INS/2004-021; (L22), 1♂ 2♀♀, ESFM-INS/2004-024; (L23), 2♂♂ 1♀, ESFM-INS/2004-030; (L45), 1♀, ESFM-INS/2005-038; (L46), 1♀, ESFM-INS/2005-039; (L47), 42♂♂ 52♀♀, ESFM-INS/2005-040; (L50), 8♂♂ 14♀♀, ESFM-INS/2005-044; (L59), 4♂♂ 5♀♀, ESFM-INS/2005-079.

Distribution in Turkey: Antalya, Malatya (Guéorguiev, 1981; Kiyak et al., 2006b; Darılmaz and Kiyak, 2009a).

Remarks: *Orectochilus villosus villosus* is new record for the Gyrinidae fauna of the West Black Sea Region.

Family Haliplidae

Peltodytes caesus (Duftschmid, 1805)

Materials: (L25), 6♂♂ 8♀♀, ESFM-INS/2004-034: (L31), 2♂♂, ESFM-INS/2004-050.

Distribution in Turkey: Aydin Muğla, Niğde, Trabzon (Delève, 1963; Olmi, 1976; Berthélemy, 1979; Jäch, 1984a, 1984b).

Remarks: *Elmis rioloides* is new record for the Elmidae fauna of the West Black Sea Region.

Esolus parallelepipedus (Müller, 1806)

Materials: (L54), 1♂, ESFM-INS/2005-057: (L55), 37♂♂ 72♀♀, ESFM-INS/2005-059.

Distribution in Turkey: Adana, Mersin (Jäch, 1984a).

Remarks: *Esolus parallelepipedus* is new record for the Elmidae fauna of the West Black Sea Region.

Limnius opacus Müller, 1806

Materials: (L55), 8♂♂ 18♀♀, ESFM-INS/2005-060.

Distribution in Turkey: Antalya, Trabzon (Delève, 1963).

Remarks: *Limnius opacus* is new record for the Elmidae fauna of the West Black Sea Region.

Limnius volckmari (Panzer, 1793)

Materials: (L9), 2♂♂, ESFM-INS/2004-005.

Distribution in Turkey: Adana, Antalya, Mersin, Niğde, Trabzon (Delève, 1963; Jäch, 1984a).

Remarks: *Limnius volckmari* is new record for the Elmidae fauna of the West Black Sea Region.

Conclusion

As a result of this work, *G. distinctus*, *G. caspius*, *O. villosus*, *H. (N.) lineatocollis*, *S. halensis*, *N. stearinus stearinus*, *A. conspersus*, *I. fuliginosus*, *H. syriacus*, *H. (A.) daedalus*, *H. (A.) lewisi*, *H. (R.) fulgidicollis*, *H. (R.) minutus*, *A. rufipes*, *E. (L.) quadripunctatus*, *E. (L.) fuscipennis*, *H. lividus*, *H. flavigennis*, *D. lutulentus*, *E. rioloides*, *E. parallelepipedus*, *L. opacus*, *L. volckmari* were recorded for the first time in the research area and also *Dryops lutulentus* was found in Ulus stream (Bartın), which was recorded for first time in Maçka (Trabzon) by Delève (1963). The number of species number will be increase with more detailed studies for this area in the future.
